Assignment # 01

Name: Sara Ajmal

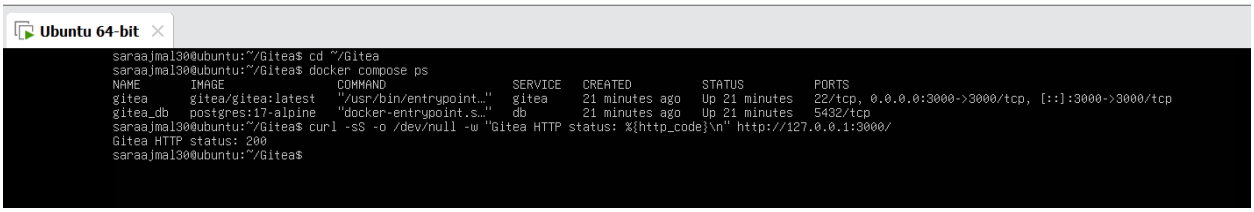

Reg.no: FA24B1-SE-030

Section: B

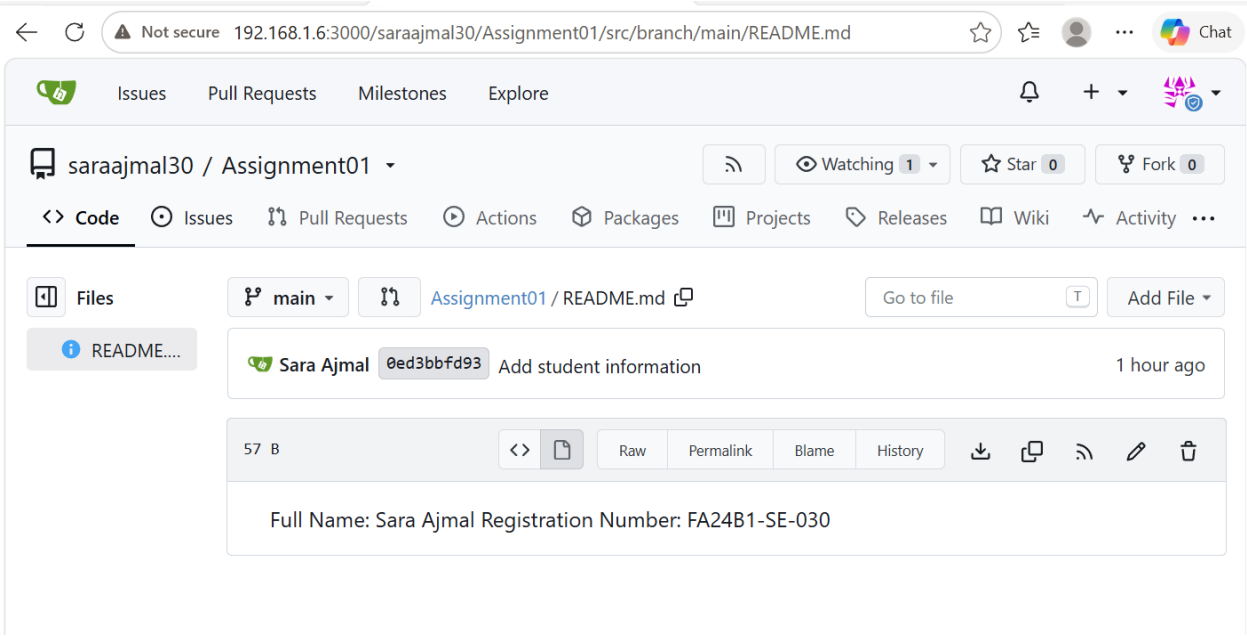

Subject: Cloud Computing

Submitted to: Sir Waqas

Task 1: Install Gitea and Push a Repository from the Ubuntu Server

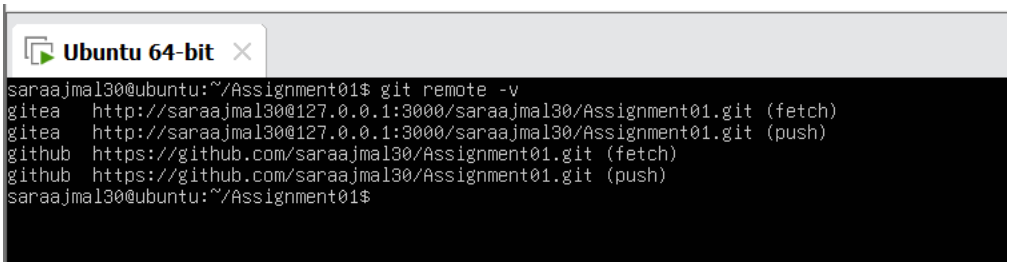

```
saraajmal30@ubuntu:~/Assignment01$ git remote -v
gitea   http://saraajmal30@127.0.0.1:3000/saraajmal30/Assignment01.git (fetch)
gitea   http://saraajmal30@127.0.0.1:3000/saraajmal30/Assignment01.git (push)
saraajmal30@ubuntu:~/Assignment01$ git push -u gitea main
Password for 'http://saraajmal30@127.0.0.1:3000':
Enumerating objects: 3, done.
Counting objects: 100% (3/3), done.
Delta compression using up to 2 threads
Compressing objects: 100% (2/2), done.
Writing objects: 100% (3/3), 285 bytes | 57.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To http://127.0.0.1:3000/saraajmal30/Assignment01.git
 * [new branch]      main -> main
branch 'main' set up to track 'gitea/main'.
saraajmal30@ubuntu:~/Assignment01$
```

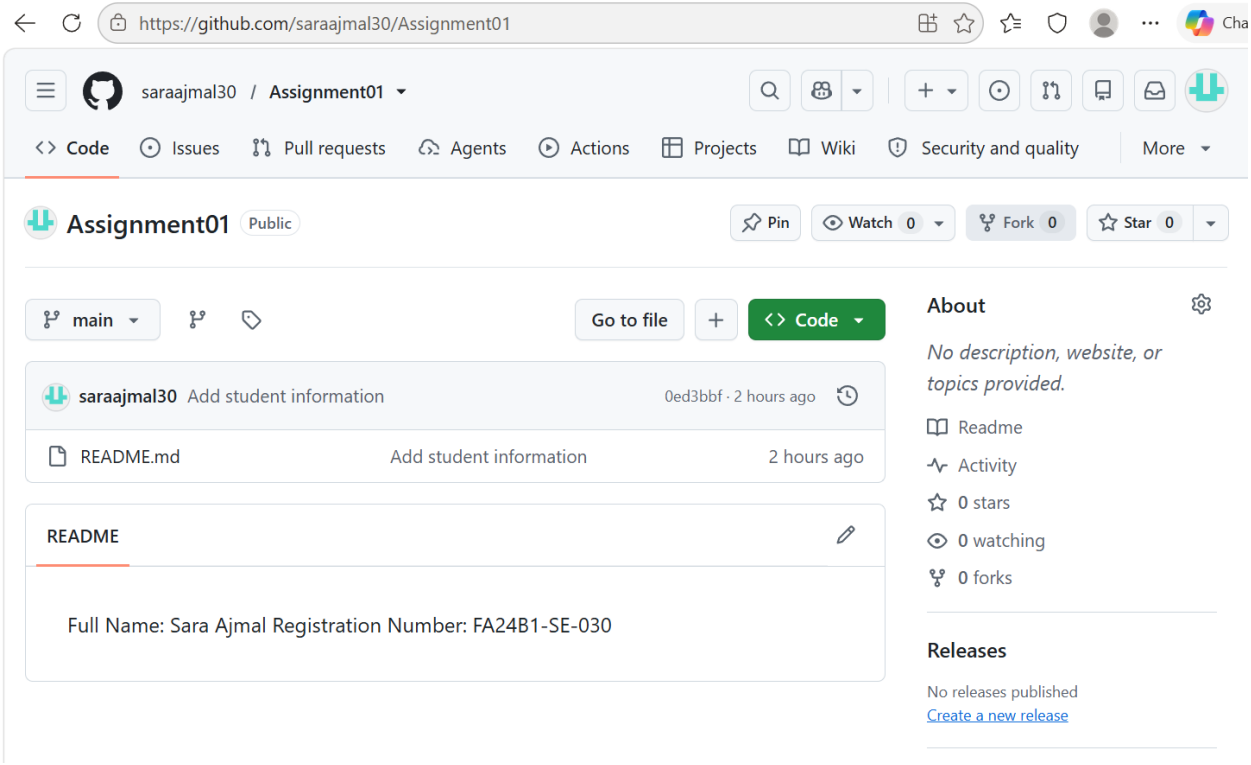

I installed Docker and Docker Compose on my Ubuntu server and started Gitea with PostgreSQL using the instructor's compose.yaml. I then created a local repository, added a README with my name and registration number, and pushed it to Gitea using a personal access token.

Task 2: Push the Same Repository to GitHub

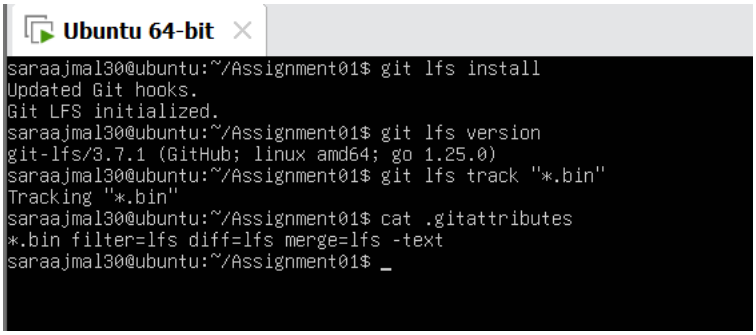

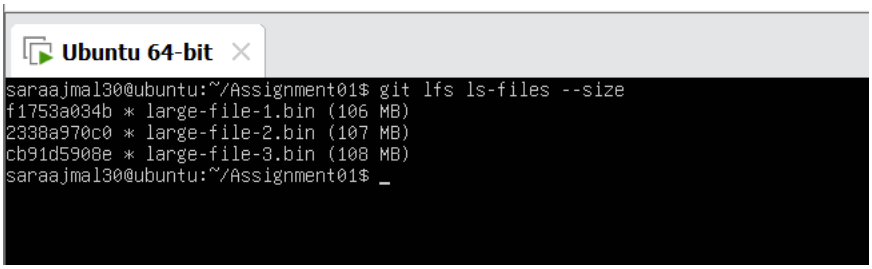

```
saraajmal30@ubuntu:~/Assignment01$ git push -u github main
Username for 'https://github.com': saraajmal30
Password for 'https://saraajmal30@github.com':
Enumerating objects: 3, done.
Counting objects: 100% (3/3), done.
Delta compression using up to 2 threads
Compressing objects: 100% (2/2), done.
Writing objects: 100% (3/3), 285 bytes | 142.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To https://github.com/saraajmal30/Assignment01.git
 * [new branch]      main -> main
branch 'main' set up to track 'github/main'.
saraajmal30@ubuntu:~/Assignment01$
```

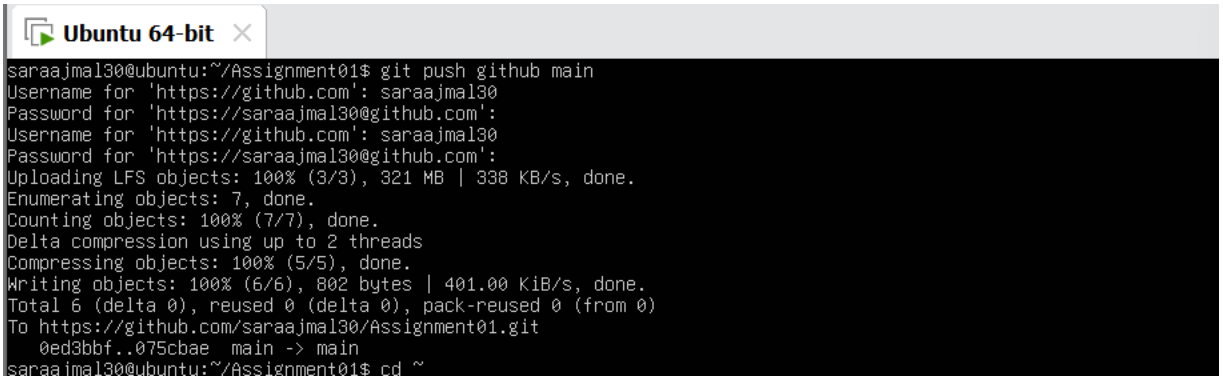

I created an empty public GitHub repository named Assignment01 and added it as a second remote called “github” next to the “gitea” remote. I then pushed the main branch to GitHub and verified the repository and README on GitHub.

Task 3: Track Three Large Files with Git LFS

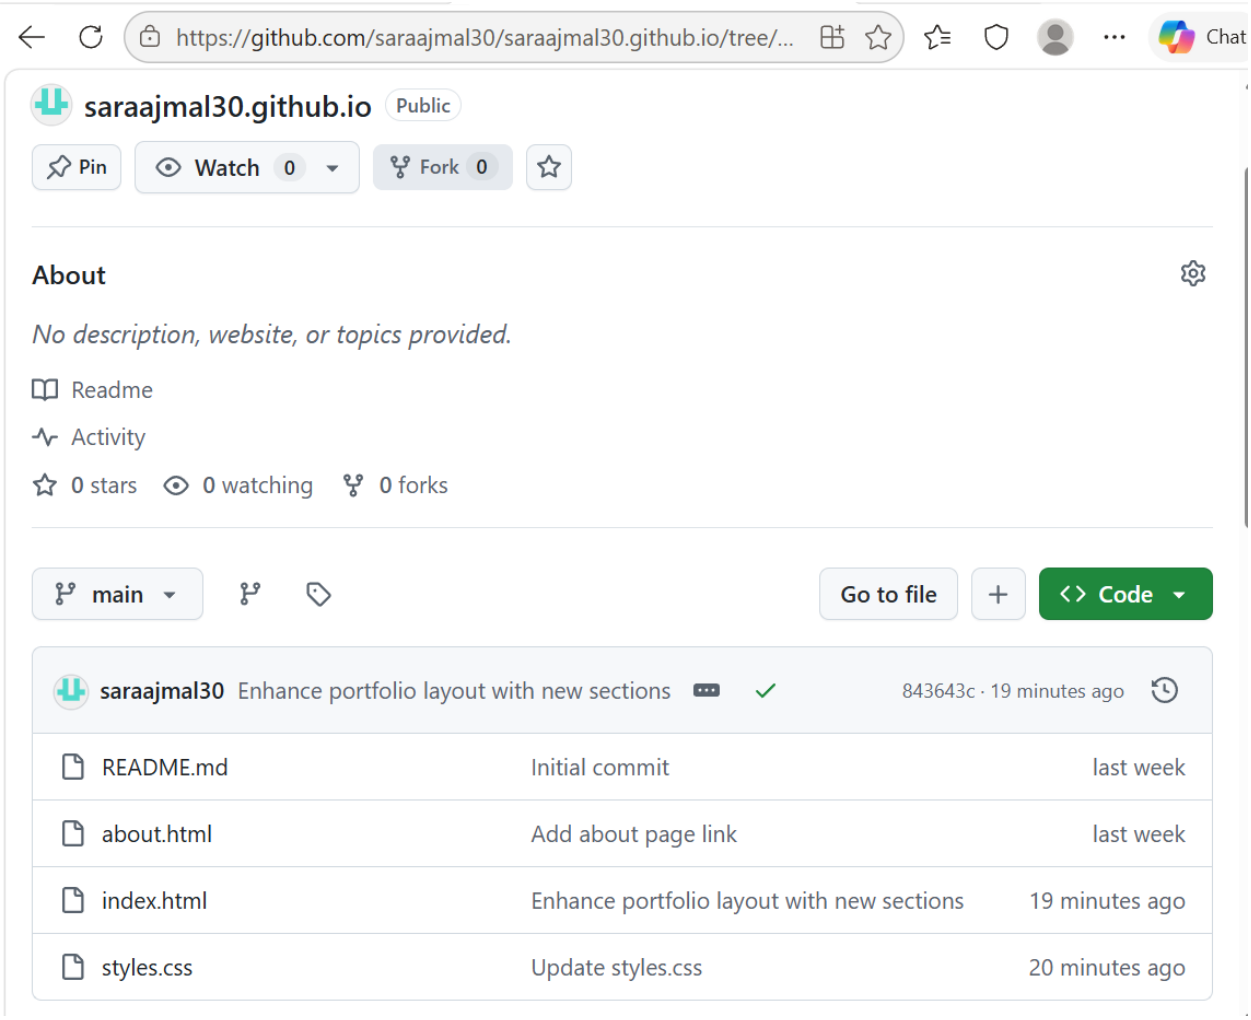

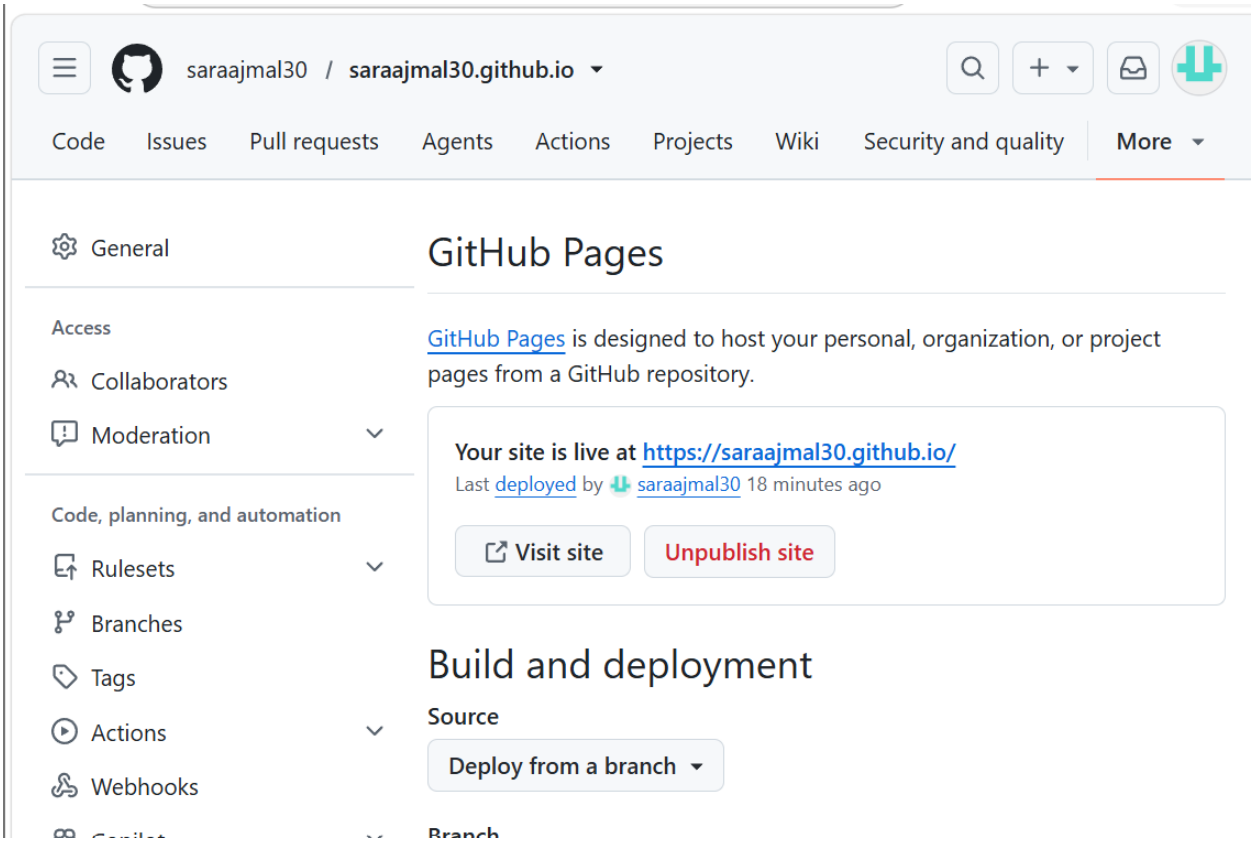

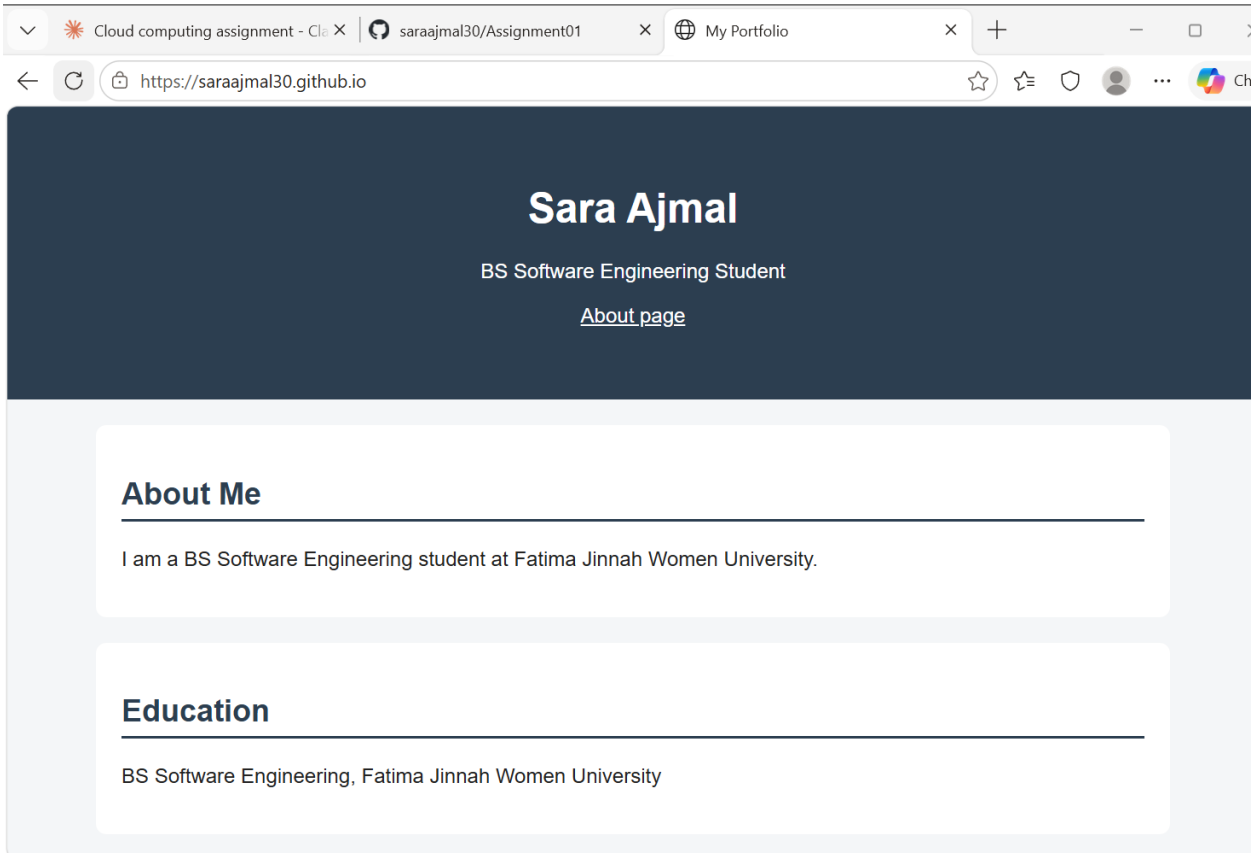

I initialized Git LFS, configured it to track *.bin files, and created three files, each larger than 100 MiB. I verified them with `git lfs ls-files --size`, then committed and pushed them to GitHub, where the LFS upload completed at 100% (3/3).

Task 4: Create a Portfolio or CV with GitHub Pages

Branch

I created a portfolio using HTML and CSS (index.html and styles.css) with About Me, Education, Skills, and Projects sections, and pushed it to my public repository saraajmal30.github.io. I then enabled GitHub Pages from the main branch (root) and verified that the live site loads.
